

Diabetic Socks-Compression Hosiery

Diabetic Socks “Seamless” socks for patients with diabetes, arthritis, edema and other systemic or foot problems. Since each sock is closed by hand, not by machine, there are no toe seams to dig into toes. All of our diabetic socks have built-in antimicrobial protection that inhibits the growth of bacteria and fungus. Protects against athlete's foot and foot odor. **Sock sizes: S/M (9-11) M/L (10-13) L/XL (13-16)**

cotton, 20% nylon and will not
constrict blood flow. The foot
features extra cross stretch for
wide, swollen or tender feet.

Not for diabetics only - also
recommended for arthritis,
edema, sensitive and wide feet.

#ISE10521 Black pr.
#ISE10525 Navy pr.
#ISE10518 White pr.

TheraFirm® A Knit-Rite Company

Compression Hosiery

A gradient compression product, such as Therafirm® is produced so that the greatest pressure is exerted at the ankle and decreases gradually and sequentially up the length of the leg. This pressure is measured in millimeters of mercury (mm Hg). These pressures range from 15-21 mm Hg for normal “street wear” type products to the heavier surgical weight in the 21-30 and 30-40 mm Hg for the relief of more serious leg and vein problems.

Therafirm® creates pressure at the ankle, which drives the blood flow deep into the circulatory system and back toward the heart. This prevents blood from “pooling” in the lower limbs and creating outward pressure, causing damage to the venous valves. This gentle pressure prevents and relieves the discomfort from the pain associated with leg fatigue. Early use of a gradient compression product will prevent serious leg and vein disorders later in life.
