

Conformer 3/4

The original Conformer manufactured with a cushioning, yet supportive foam footbed. Our most affordable and popular Conformer 3/4. Blue packaging.

No. Con34, **pr.**

These prefabricated orthotics are designed with a contoured heel cup to cradle and stabilize the heel. A raised longitudinal arch, a gentle metatarsal support to reduce pressure to the metatarsal heads and a cuboid relief that balances pressure across the midfoot.

Sizes:	
Wos	Men's
3-4	7-8
5-6	9-10
7-8	11-12
9-10	13-14

Conformer 3/4 DD (Dual Density)

The Conformer DD is a combination of two materials with the top surface firmer than the bottom. This combination gives comforting support through the bottom shell and biomechanical control from the top layer. The Dual Density is usually chosen as a Sports Orthotic for control as well as for comfort.

Green packaging, No. Con34DD. **pr.**

Conformer 3/4 HD (High Density)

The Conformer HD is one piece of extra firm material molded into our design. It can be ground or posted and is used when customizing is needed as an option, or when the weight of the patient is a concern. Red packaging.

No. Con34HD, **pr.**

Synergel™ Spur Cradle

These heel pads were engineered to cushion at heel strike in order to protect painful heels. Our channel design cups the heel thus taking pressure

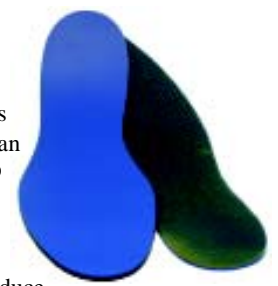

off painful bone spurs and refocusing the body's natural fat pad (shock absorber) under the heel. Our left and right design helps to support the medial arch and inhibit hyperpronation.

The Bottom Layer: Synergel™ is a viscoelastic polymer gel that can flow like a liquid in many directions. At impact this material spreads in all directions away from the impact point acting as a shock absorber. Synergel protects against foot, knee, and back pain by absorbing and dissipating shock at impact and preventing shockwaves from moving up the skeletal structure.

The Top Layer: Poron® cellular urethane has millions of microscopic cells to cushion the foot and allow air and moisture to pass through, which keeps the foot cool and dry.

Synergel™ Insoles

These flat insoles are designed to absorb the body shock that causes tired, aching feet and can contribute to knee, hip and low back pain.

They also distribute body weight when standing, helping to reduce "load" to the ankle, leg, hip, and spine. These insoles are less than 1/4" thick and will provide a soft tissue supplement in any type of shoe.

Synergel™ Arch Pad

This traditionally designed pad aids in supporting and cushioning the medial longitudinal arch. Our unique combination provides comfortable, conforming and cushioning support that will not lose it's properties over time.
